

Word to PowerPoint Converter – User Guide

This guide explains how to convert Microsoft Word documents into PowerPoint presentations using the provided script. It covers folder setup, running the script, and how to correctly apply Word paragraph styles so your content maps to the right PowerPoint slide layouts and placeholder levels.

Folder Setup

Your working folder should contain: - The script file (convert_docs_to_pptx_GRD.py) - A PowerPoint template file (.pptx) - An input_docs folder for .docx files - An output_pptx folder where converted files will be saved The script will read all .docx files in input_docs, apply your template, save the resulting .pptx files to output_pptx, and remove processed .docx files from input_docs.

How to Run

1. Place your Word (.docx) files in the input_docs folder. 2. Make sure your desired PowerPoint template (.pptx) is in the same folder as the script. 3. Run the script by double-clicking it or executing: `python convert_docs_to_pptx_GRD.py` 4. Converted presentations will appear in the output_pptx folder.

Word to PowerPoint Style Mapping

Word Style	PowerPoint Layout	Placeholder / Level
Title	Title Slide	Title placeholder
Heading 1	Section Header	Title placeholder
Heading 2	Title & Content	Title placeholder
Subtitle	Section Header	Subtitle placeholder
Normal	Title & Content	Level 0 in text placeholder
List Paragraph	Title & Content	Level 2 in text placeholder (bulleted)

Formatting in Word for Best Results

Slide Titles: Use Title style for the Title Slide, Heading 1 for Section Headers, and Heading 2 for Title & Content slides. Subtitles: Apply the Subtitle style for Section Header subtitles. Body Text: Use Normal style for non-bulleted text and List Paragraph style for bulleted lists. Bold, italic, underline, and hyperlinks will be preserved. Bullet style and indentation are taken from your PowerPoint template's slide master.

Tips

- Use proper paragraph styles in Word instead of manual formatting. - Update your slide master in PowerPoint if you want to change fonts, colors, or bullet formatting. - Keep your Word file clean — avoid extra manual spacing.
